Product Description

The PCI-E 750 is an Intelligent Dual Gigabit Ethernet I/O Controller that is applied in embedded systems for real-time protocol processing, security, and high throughput LAN applications. The PCI-E 750 supports Intel's highly integrated 80332 XScale Microarchitecture with a tightly coupled XScale Core, Memory Controller and PCI-Express to PCI-X bridge. A Dual Gigabit Ethernet Controller supports either two copper or fiberoptic Ethernet interfaces.

Embedded/Real-time development is supported by the availability of the Breeze Development Environment, VxWorks, ZeroCopy TCP, and Linux 2.6.
